

Demographics and Marketing Analysis

George Breese

2Market

Problem Statement

- 2Market is an international grocery retailer that operates both online and through physical stores.
- To allow the business to stay competitive, or grow their market share, the company will need to analyse the relationship between their customers' demographics and buying habits along with the interactions via the different marketing channels.
- This analysis will ascertain whether buying habits are associated with demographic factors such as marital status or location, as well as identify patterns between purchases and interactions with the company's marketing campaigns. Insights gained from this analysis will help determine which are the most successful marketing strategies to pursue.

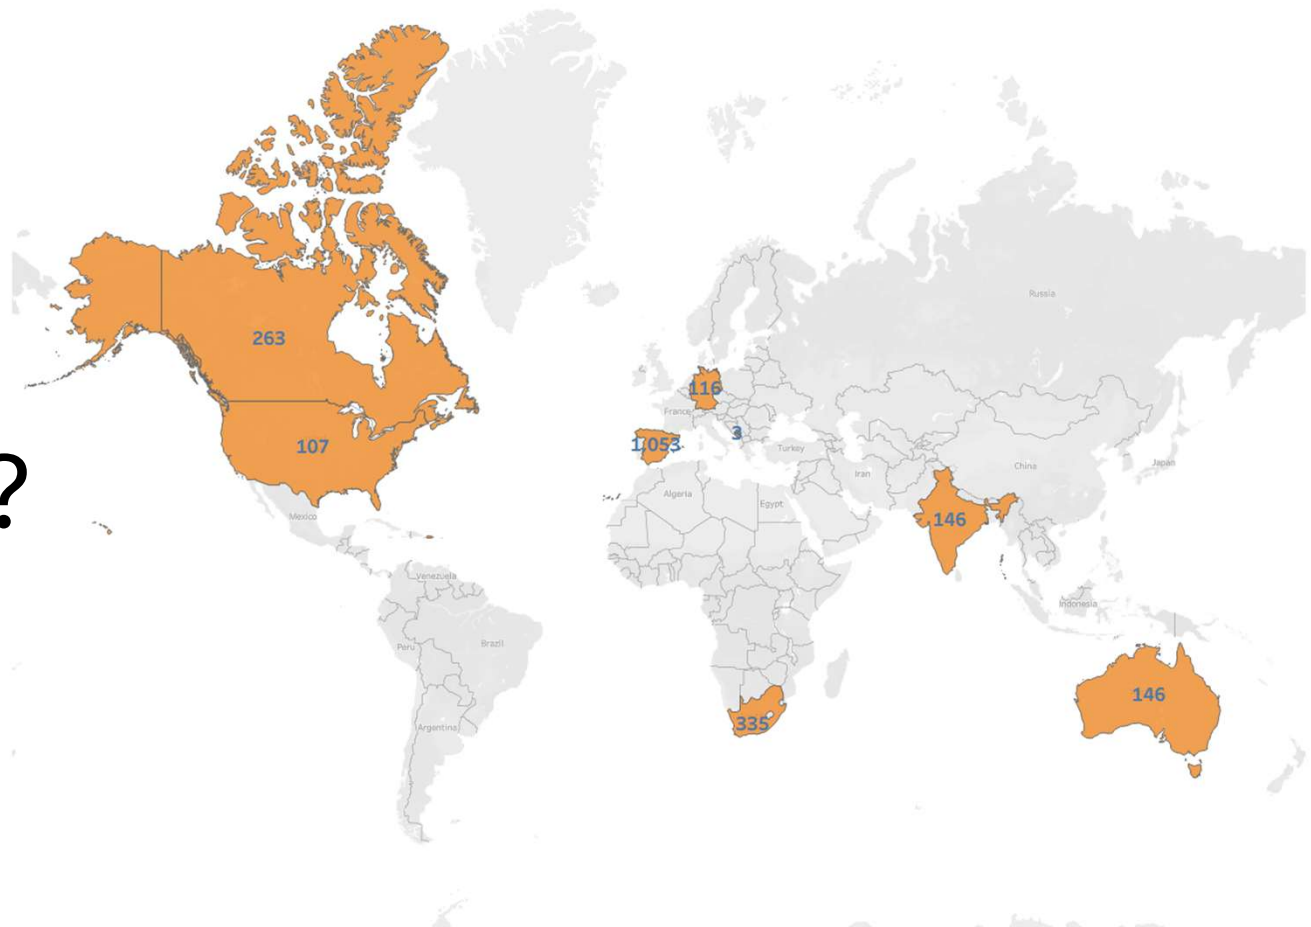

Analytical Objectives

1. Identify customer locations and demographics to better target marketing strategies going forward
2. Ascertain which category of products generate the most sales within the business to help determine which category of products to target in the future
3. To determine which advertising channels, generate the most hits, and therefore the most sales, so that the marketing budget can be better utilised for future campaigns

2. Ascertain which category of products generate the most sales within the business to help determine which category of products to target in the future

What is the breakdown of product sales when we look at customer marital status?

2. Ascertain which category of products generate the most sales within the business to help determine which category of products to target in the future

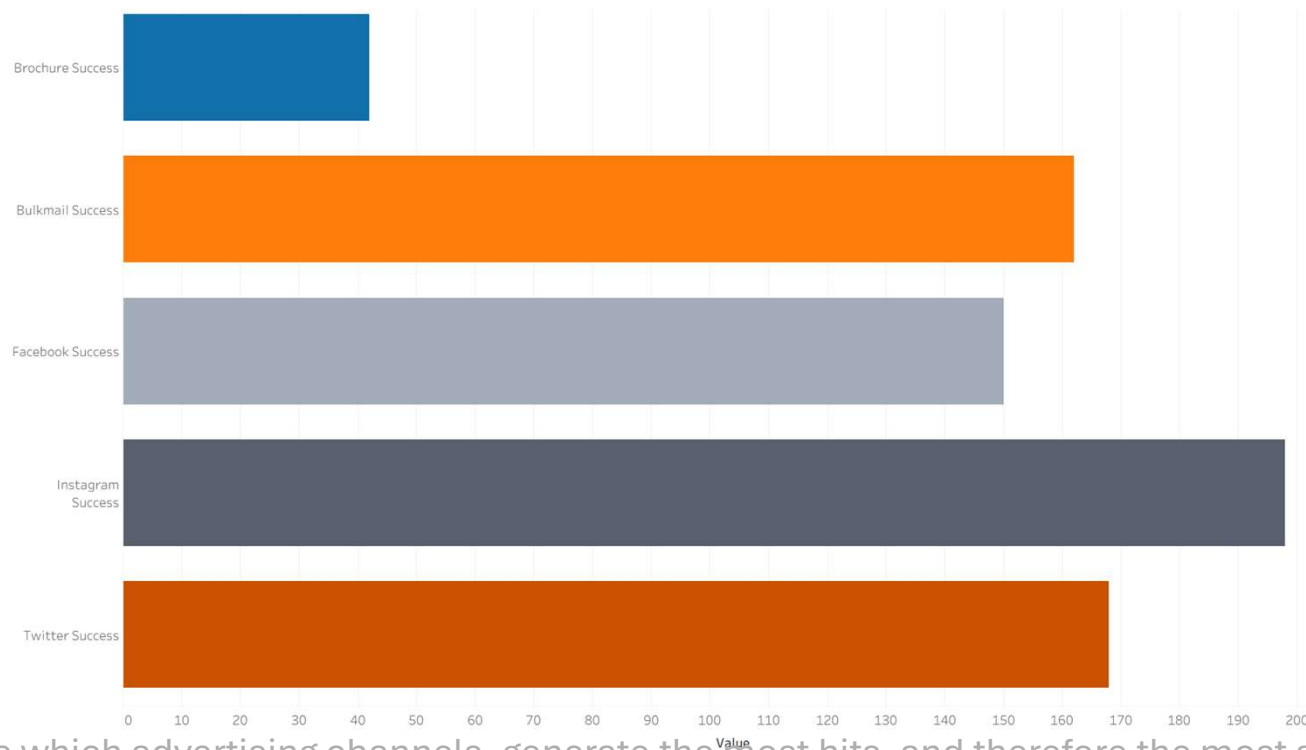

Ascertain which category of products generate the most sales within the business to help determine which category of products to target in the future

- The product category with the highest spending is alcohol, followed by meat
- When the spending is broken down by income, spending on alcohol is the highest for customers with an income less than \$100000. For those customers with an income above \$100000, the highest spending is on meat
- Alcohol has the highest spending when compared to marital status and location

Analytical Objectives

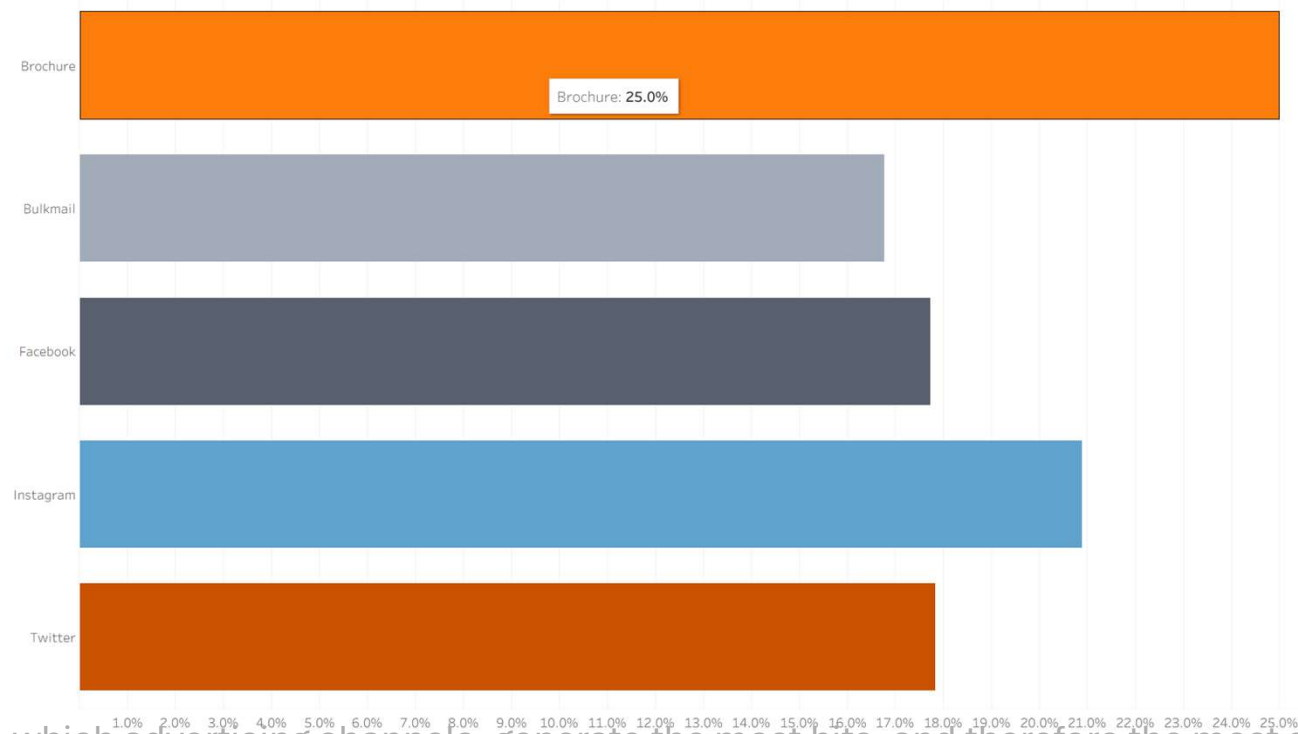

1. Identify customer locations and demographics to better target marketing strategies going forward
2. Ascertain which category of products generate the most sales within the business to help determine which category of products to target in the future
3. To determine which advertising channels, generate the most hits, and therefore the most sales, so that the marketing budget can be better utilised for future campaigns

Which advert channel has the most successful interactions?

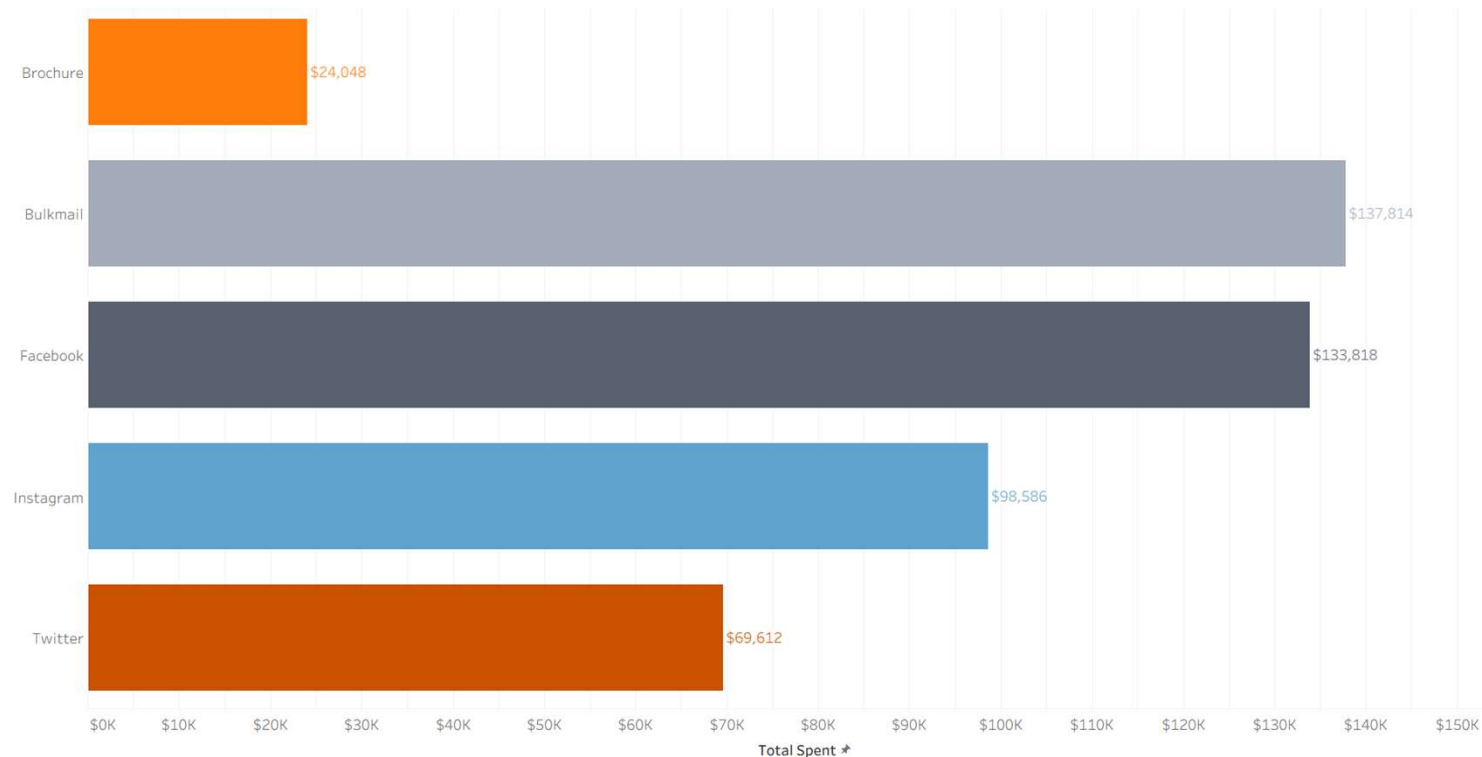

3. To determine which advertising channels, generate the most hits, and therefore the most sales, so that the marketing budget can be better utilised for future campaigns

Which advert channel has the highest percentage of successful conversions?

3. To determine which advertising channels, generate the most hits, and therefore the most sales, so that the marketing budget can be better utilised for future campaigns

Which advert channel creates the highest total spend?

3. To determine which advertising channels, generate the most hits, and therefore the most sales, so that the marketing budget can be better utilised for future campaigns

Dashboard

3. To determine which advertising channels, generate the most hits, and therefore the most sales, so that the marketing budget can be better utilised for future campaigns

To determine which advertising channels, generate the most hits, and therefore the most sales, so that the marketing budget can be better utilised for future campaigns

- Instagram has the most countable hits
- 25% of all the brochure adverts lead to success. The most for all the advert channels
- Bulkmail adverts create the most spending of all the advert channels
- Facebook adverts create the most spending of all the social media channels

Recommendations

- Targeting customers in the “Partner” demographic may increase campaign effectiveness as this group demonstrates higher engagement and likely higher household spending.
- From the analysis undertaken, it can be noted that 2Market has a strong brand within Spain. This shows that the marketing campaigns have been successful within this country. South Africa has significant potential for growth, as there has been numerous successful adverts in the country. More marketing within South Africa is recommended to capitalise on growth potential.
- The analysis has also shown that the bulkmail advertising channel has significant success across the board – this resulted in the most spending when a customer interacted with the advertisement. Although there were fewer brochure advertising responses compared to any others, there was a higher success rate for them – 25%. This is something to keep in mind when moving forward with the campaign. When focusing solely on social media advertising streams, Facebook and Instagram should be prioritised over Twitter due to its higher effectiveness with regards to customer purchasing.
- Focusing on single people in South Africa through Facebook can be seen as a successful route for growth. Future marketing through bulkmail can allow for the brand to grow, as this results in the most direct sales.
